

Swine influenza and its protocol, nothing seemed to work, except -

CDS, MMS2 and Lactaid®

Its influenza season in northern Canada, and this year the outbreaks have been especially vicious! I have been taking CDS for more than a year now and have seen my health become better and better. I do have a small background in chemistry/biology and have been looking for CDS for 30+ years. I have become convinced this MMS is the answer to the world's health problems!

There have been two occasions that have caused me to stumble a bit with the wondrous powers of CDS....firstly after 11 months of taking CDS every day - poof I got a cold sore! Needless to say I was shocked, but soldiered on with adding mms2.....next came a variation of the swine flu!! CDS and MMS2 seemed powerless to stop it!! I even drank three 700ml bottles of mixed CDS at 35 ppm one day.....nothing, not even a blimp, I was getting really sick!

(7ml of 3500ppm CDS into 700ml of water for a daily bottle, equals 100ml of 35ppm CDS per hourly dose.)

Laying in bed, devastated that the miracle solution had met its match...I started to get logical. Why wasn't the CDS able to kill the virus? It must be a very well protected virus, a heavy sugar coating shielding it from the CDS! I crawled out of bed and all I could find was Lactaid®, a milk sugar digestive enzyme! I took about 5 or 6 capsules, and one size 3 MMS2 capsule and then 100ml of 35ppm CDS.

Within an hour, my sinuses cleared and felt dry, my fever had stopped and I was feeling better!!!

I thought I would add this to the forum in case it might help anyone who can't seem to get CDS to work on a flu.
